PROFESSIONAL SUMMARY

Java Backend Developer with 1.5+ year of professional experience building and enhancing enterprise ERP solutions using Java, Spring Boot, Hibernate, and MySQL. Skilled in integrating messaging platforms, CRM systems, and notification services, including WhatsApp, SMS, Email, and Firebase Cloud Messaging (FCM) HTTP v1. Proficient in REST API development, with knowledge of Spring Security, JWT, OAuth 2.0, and Microservices. Recognized with Best Performer ↗, Best RCA ↗, and Best DSI ↗ awards.

TECHNICAL SKILLS

Programming Languages: Java, SQL
Backend Technologies: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Spring Profiles, Spring AOP, Filters, Interceptors, REST APIs, Microservices, JWT, OAuth 2.0
Databases & Caching: MySQL, Redis
Integrations: CRM Integration, WhatsApp Business API Integration, SMS & Email Integration, Firebase Cloud Messaging (FCM) HTTP v1
Tools: Git, Gitlab, Linux, Maven, Postman, SLF4J
Core Concepts: OOP, Collections Framework, Exception Handling, Multithreading, Authentication & Authorization

PROFESSIONAL EXPERIENCE

Java Backend Developer June 2025 – Present
Acme Infovision System Pvt. Ltd. *Satara, Maharashtra, India*

Messaging Integration: WhatsApp, SMS and Email

- Worked on the ERP's existing messaging pipeline, which sends WhatsApp, SMS and email messages for Bill Print, Campaign Management and Rate Change.
- Integrated four WhatsApp Business providers (Qikchat, AutoBots, Jwero, BotSense), handling each vendor's authentication, request payload and response format.
- Migrated Pinnacle from API v1.3 to v3 using version-based API and payload handling, so existing configurations kept working.
- Extended the BusinessMantra WhatsApp integration from text and bill-PDF messages to image, video and fixed-document messages, and added the same media support in Qikchat, AutoBots, Jwero, Pinnacle and BotSense.
- Fixed defects in the existing SMS, email and WhatsApp webhook flows (live metal rates, salesman rating), gaining working knowledge of how they run.
- Remotely set up and enabled WhatsApp messaging (Pinnacle, BusinessMantra) at jewellery retail clients, including large jewellery chains.

Firebase Cloud Messaging (FCM) HTTP v1 Migration & Master Notifications

- Migrated legacy Firebase Cloud Messaging (FCM) integration to HTTP v1 to enable POS mobile app push notifications for PADM master operations, including create, modify, delete, cancel, and restore.
- Developed ConcurrentHashMap-based caching for Firebase credentials and notification configurations; delivered notifications containing master details, record values, actions, timestamps, and user information to help end users track master changes in real time.

Jwero CRM Integration & Customer Data Sync

- Built a PADM-to-Jwero CRM integration over REST APIs, with bulk customer migration in batches of 100 and incremental ADD/UPDATE sync driven by the customer audit table.
- Implemented customer ID mapping, duplicate contact detection, API logging, sync status tracking and automatic retry for network/server failures, so failed records are recovered without manual work.

Database Backup Monitoring & Management System

- Developed a backend system, in coordination with the Infra team that owns the backup scripts, to configure which MySQL databases are auto-backed up, with duplicate prevention and activity logging of every change made to the backup settings.
- Added backup history and error log tracking with date, database and status filters, and automatic detection of failed or missed backups from the previous day, so backup issues are caught early without manually checking each database.

PROJECTS

Employee Expertise & Opportunity Portal | *Java 17, Spring Boot, Spring Security, JWT, MySQL, Redis* GitHub ↗

- Developing a role-based platform for employee expertise discovery, internal opportunity management, and employee applications using REST APIs with request validation and global exception handling.
- Implementing JWT authentication, BCrypt password hashing, role-based authorization, profile management, and secure opportunity workflows using Spring Boot and JPA/Hibernate.
- Integrating expertise-based search, pagination, Redis caching, asynchronous profile-image uploads, email notifications, and SLF4J logging.

EDUCATION

Rajarambapu Institute of Technology, Sakharale, Sangli, Maharashtra 2022 – 2025
Bachelor of Technology in Computer Science and Information Technology CGPA: 8.9 / 10.0
